

The Top 600 Specialty Contractors List

October 11, 2010

The recession took a brutal toll on many large specialty contractors and subcontractors as they burned through backlogs built up in the boom years. The economic impact is clear: ENR's Top 600 Specialty Contractors had a combined revenue of \$72.55 billion in 2009, down 16.6% from 2008. Of the 536 companies on this year's list that also submitted surveys last year, 414 saw declines in revenue in 2009, while 117 had increases in revenue. They expect more of the same in 2010.

Hanging On Despite Hard Times

In this recession, most large specialty contractors and subs are willing to sacrifice the top line to preserve a healthy bottom line

For many firms in the construction industry, the market recession is well into its third year, and most executives believe it shows no signs of abating. Specialty contractors and subcontractors have been hit particularly hard; few had healthy backlogs to tide them over for an extended period of time.

Many large specialty contractors have gone into survival mode, accepting lower revenue levels, pursuing only those projects that make sense and only working with customers and partners they trust.

The impact of the downturn can be measured by the results of the ENR Top 600 Specialty Contractors survey. The Top 600 as a group had contracting revenue of \$72.55 billion in 2009, a drop from \$87.02 billion, or 16.6%, for the group in 2008.

The scale of the downturn can be seen in the individual responses to the Top 600 survey. A total of 536 companies on this year's Top 600 also sent in surveys last

year. Of that group, 414 saw a drop in 2009 revenue from 2008 levels. Only 117 firms had increased revenue levels—barely one in five grew in 2009—while five had revenue that was essentially flat.

Most specialty contractors believe there will be no major turnaround any time soon. “I don’t see things getting any worse—just more of the same,” says Tony Guzzi, president of EMCOR Group. “People are prepared to deal with the slow market for the next 12 to 18 months.”

“There isn’t any light switch that will come on to turn around the market,” says Mark Rondeau, manager of business development for Dunkin & Bush. “We were hoping for a turnaround in September 2010, but now we are looking to September 2011,” says John Boncher, recently-appointed chief executive officer of Cupertino Electric. However, he says predicting the market is difficult at this point. “Going out any farther than the

current project cycle is just guesswork.”

Two Markets

The recession has forced a tough decision: Bid for quantity or quality. “It takes some real courage to shrink your top line,” says Guzzi. EMCOR’s revenue was down last year from 2008, and the firm reluctantly laid people off. “But the alternative was to chase anything, and we have been trying really hard not to take bad jobs,” he says.

Many larger contractors are becoming more selective in the projects they pursue. “There are two markets out there: a price-driven market and a value-driven market,” says Dave Suder, CEO of KHS&S. He says his firm avoids the hard-bid market because of the risks to the bottom line.

“You have to learn to say no to bad deals in bidding, where the [firm that makes the] biggest mistake wins the job,” says Charlie Bacon, CEO of Limbach Facility Services. He says the firm recently was invited by a general contractor to partner on a project, but the GC said the owner insisted on bringing in a dozen other bidders. “We appreciated the offer, but we had to decline,” Bacon says.

Times are tough, but some say the sense of doom and gloom may be overblown. “People tend to go into a recession as optimists, believing that things will turn around quickly,” says E. Colette Nelson, CEO of the American Subcontractors Association, Alexandria, Va. However, she says once a recession lengthens, people in the construction industry tend to turn pessimistic until a recovery is well under way. She says people are beginning to get work.

Many subs say that there still is work out there. “The difference between this market and the one in the early 1990s is that there is work to bid this time around,” says Suder. He notes that the total U.S. market still is about \$900 billion. He says KHS&S’s market is on par with what it was in 2004. “We thought 2004 was a really good year. You just have to do your job, and your revenue will be what it will be,” he says.

On the industrial-services side, it is no different. “Capital spending is down, but

“You have to learn to say no to bad deals in bidding, where the [firm that makes the] biggest mistake wins the job.”

— CHARLIE BACON, CEO
Limbach Facility Services

people still need gasoline and they still need power, so our customers still have to keep their industrial infrastructure maintained,” says Rondeau.

“There is work around, but the prices on the smaller projects are very competitive,” says J. Robert Mann, chairman of E-J Electric Installation. He says E-J Electric is tracking several large, complex projects coming up for bid in New York City where few electrical subcontractors have the size and expertise to tackle the job. E-J Electric is part of the team that won the job to build the Barclays Center in Brooklyn.

There are some signs of an uptick in the market. “We are seeing the pipeline improve. We tracked a 22% increase in opportunities in the last quarter,” says Bacon. He concedes this activity does not constitute a recovery, but it is a positive indicator.

Many firms look with skepticism at federal stimulus packages. Guzzi says the \$50-billion infrastructure stimulus bill proposed last month would not be enough to affect the market. “The commercial market is dead, and there’s not enough money ... on the federal and state level to take up the slack,” says Mike Taylor, executive director of the National Demolition Association, Doylestown, Pa.

Guzzi says American corporations have an estimated \$1.8 trillion in cash on hand. “Once there is more certainty on federal tax and energy policy, some of that

money may start being spent on hiring and capital programs,” Guzzi says. “Public spending will not end the market recession. Private spending will.”

Some firms have been able to avoid some of the impact of the recession thanks to the markets they serve and the services they provide. M.C. Dean managed to increase its revenue in 2009 despite the downturn. “We did this by being diverse in both the buildings and infrastructure markets,” says CEO Bill Dean, noting the firm just won a major life-safety contract with the Metropolitan Atlanta Rapid Transit Authority.

Dean also notes that his firm has had major successes in the manufacturing market in the South. “That has made up for the falloff in the commercial market.” Further, M.C. Dean has won some big contracts in the health-care market.

Another firm that has been helped by its diversity is Southland Industries. “We now do more business outside of our home state of California than within it,” says Ted Lynch, regional president.

Southland has benefited from the fed-

eral building boom, but it also has a substantial presence in the health-care and education markets, Lynch says. For example, the firm was part of the design-build team that recently won the \$500-million hospital project at Fort Hood in Texas.

Mergers and Acquisitions

The recession has many owners of specialty contractors looking to get out of the business, rather than going through tough times one more time. But owners looking to sell have seen multiples fall rapidly, devaluing the equity in their firms. Thus, while these owners may want to cash in and get out, they are reluctant to do so at rock-bottom prices, which has caused a falloff in the amount of transactions.

However, Guzzi of EMCOR believes the industry is nearing a tipping point on M&A activity. He says many owners were waiting for the market to get better to sell at a higher multiple, but they now believe the turnaround may be two to three years away. “They may not want to wait that long,” he says.

Some say European money will continue to enter the U.S. market. Andy Walker, CEO of Nicholson Construction, says European firms recently have acquired several heavy and civil contractors in the New York City area, including Secaucus, N.J.-based Schiavone Construction by Spain’s Grupo ACS and Holmdel, N.J.-based E.E. Cruz by Germany’s Hochtief.

Some firms are holding fast. “We are a group of roofing executives with 30-plus years in the industry, not a roll-up,” says Richard M. Nugent, CEO of Nations Roof. “We have no interest in buying other roofers. When we expand, we do start-up offices.” He says the cost and risk of starting up in a new location make expansion a bad idea in this market.

Holding On

For the past 18 months, industry executives have been predicting the recession and aggressive bidding would cause a wave of contractor failures; however, there has been little evidence of widespread bankruptcies. “We have seen a couple of

contractor failures and some that have had their credit lines pulled, but I thought we would see more," says Bacon. Sureties don't see a wave of firms going out of business any time soon, says Bacon.

Many contractors have maintained good business practices, but others have been bidding wildly. Suder saw a bid spread for a school drywall contract that ranged from \$1.5 million to \$3.6 million. "How do you leave that much on the table in a 3%-margin business?" he says.

Owners and GCs are growing increasingly wary of subcontractors' financial health. "Clients are looking for more prequalification and background checks," says Burt Fried, chairman of LVI Services. While subs once would have had to complete a one-page form, prequalification forms now can run to a dozen pages of detailed questions, he says.

ASA is conducting workshops on how subs can present themselves effectively to GCs and owners. "The prequalification document is not just a piece of paper but a means to sell yourself," says Nelson.

For some, this increased scrutiny is

welcome. "We like it because maybe it will help weed out some of the less reliable general contractors," says Walker of Nicholson Construction.

Many subs say the surety market is tightening up. "Bonding is tight, and sureties are making you dot all the i's and cross all the t's, but that benefits the healthy contractors and is good business," says Mann of E-J Electric.

Unlike the past couple downturns, there have been fewer complaints about predatory practices by general contractors during this recession. "The major GCs are being really fair," says Mann. "GCs are requiring competitive pricing, but they also appreciate quality and are willing to pay a little more for it," Mann says. "Owners are beating up on everyone, so GCs and subs see that they are all in the same boat and are working together," adds Boncher.

Nelson thinks there are not as many predatory practices being used by GCs during this recession as compared to past downturns, saying, "It is not as pervasive, but it still is going on." Nelson cautions

that subs should be careful if contract requirements or conditions look too onerous. "Sometimes, the best jobs are the ones you never took."

Nicholson Construction's Walker agrees, saying, "The bad guys [among GCs] are getting worse, and the good guys are under pressure to push subs." He says some GCs are attempting to cut costs and retain profits by self-performing the more simple tasks they used to sub out. "That isn't always the wisest decision."

A buyers' market is tilting the playing field. "Owners are taking a much tougher stance on things like change orders," says Boncher. "Whenever the issue comes up, the first word out of their mouths seem to be 'no.'" He says GCs and subs have to spend increasing amounts of time and effort to get paid for changes. "So those contractors that bid low and hope to make it up on change orders risk getting into trouble," Boncher says.

But ASA's Nelson warns that strict contract enforcement by owners can cut both ways. "With margins so tight, GCs and subcontractors may also be less will-

ing to perform courtesy changes that may cut into their bottom lines, the way they did in the past," she says.

Managing for Success

Bacon of Limbach cautions that subs must get smarter about managing their companies to survive, saying, "You don't succeed simply by bidding lower. You have to improve efficiency." Limbach has been implementing a variety of lean construction practices, including the use of building information modeling and working with designers, general contractors and suppliers on how to squeeze waste out of the process.

Many firms have learned lessons from the past that they are now applying to the current downturn. For example, the sudden spike in steel prices seven years ago hit The Williams Group hard, and the firm struggled for several years before coming back to financial health. "We have consolidated our fabrication work and have strategically upgraded our equipment to help," says Marianne Pastor, vice president. "We have been very methodical in what we bid on and how we deal with suppliers." The company is sticking to what it does best, she says. "Now it is critical to shepherd your resources and not

try to be all things to all people."

For many specialty contractors, decisions made years ago are paying off now. "We [prepared] ourselves ... for bad times six to seven years ago by diversifying," says Walker. By providing a broad variety of product lines and expanding geographically, Nicholson has been able to do well in a down market, according to Walker. "I pity firms with just one specialty in a limited geographic market," he says.

Limbach is improving efficiency by using prefabrication and off-site system assembly. "We can now complete up to 40-ft mechanical sections and ship them to the site on tractor-trailers to hang on site," says Bacon. He says this process is not only more efficient but safer.

LVI is another firm that is making a few changes to improve efficiency. "We have been asked by clients to take on more responsibilities," says Fried. In the past, for example, LVI would sub out many tasks. "We are now doing more self-perform. It reassures the client on scheduling and process, and it avoids factoring in double margins into bids," he says.

LVI is one of the many firms making moves to expand into other markets. To this end, on Sept. 27, the company appointed as president and CEO Scott State,

who is the former CEO of MACTEC, an Alpharetta, Ga.-based engineering firm. "We are moving into the power, industrial and hydrocarbon markets, and Scott's experience at MACTEC in those markets will help us do that," says Fried, LVI's chairman.

Fried says LVI is targeting the Dept. of Energy's decommissioning program, in which State has experience. Finally, LVI has its eye on the international market and now is expanding into the U.K. and the Middle East.

Green Energy

Green building continues to be strong, but the emphasis is shifting toward energy efficiency. "We are expanding our work in green and photovoltaic roofing," says Nugent of Nations Roof. Using the right design and installation can turn a roof from an expense to a profit center, according to Nugent.

The data-center market is also active. As data centers require a lot of energy to operate, power-usage effectiveness (PUE)—the number of watts of power it takes to supply one watt of power to the servers—is the key to measuring energy efficiency. "Energy is one of the biggest overhead items, so PUE is one of the most

critical concerns for the owner,” says Boncher of Cupertino Electric. He says innovative design can reduce the PUE significantly. Cupertino recently completed work on a data-center project that has a very efficient 1.08 PUE, compared with the industry average of 1.92.

Energy retrofits is another area of opportunity. The National Electrical Contractors Association, Bethesda, Md., is working with its members to penetrate this sector. “This is a big market, and we are offering training programs in how to provide energy-efficiency services,” says John Grau, NECA’s CEO.

But Grau says that many electrical contractors are used to bidding through general contractors and do not know how to effectively market directly to owners. NECA also is offering a program for members on how to sell to potential clients, Grau says.

Many firms are taking advantage of this opportunity. “We are hiring staff with experience marketing directly to the C-suite level—the CEOs and CFOs,” says Bacon. He says the firm is concentrating on the hospital market and smaller colleges. “We call the group Limbach Energy Services Division.”

Energy retrofits that are slow to make

progress are in the building’s skin. “The building envelope is one area where a lot of energy can be saved, but I haven’t seen any surge in interest,” says Mic Patterson, director of strategic development for curtain-wall giant Enclos Corp. He says that, because of the cost, facade retrofits are among the last to be considered. “Mostly, we see low-E films being applied.”

Part of the impact of the recession is that prices of materials and equipment have fallen or stabilized. “Steel prices have been steady,” says Pastor of The Williams Group. She has heard that steel imported from Canadian producers has brought down prices for some projects that do not contain local-content requirements, such as on federal projects.

The recession also has had an effect on equipment prices and availability. “Two or three years ago, you couldn’t rent a hydraulic rig. Now, everyone has anything you need,” says Walker. “There is a lot of heavy-iron, top-flight stuff available now,” says Taylor of the National Demolition Association; this surplus has helped NDA members make major equipment purchases and upgrades.

However, Taylor says the recession has not stopped some of the major equipment companies from marketing new equip-

ment. “We hear [Peoria, Ill.-based] Caterpillar is introducing a new 30/70/100 line of demolition-friendly excavators,” he says. Taylor says German-based equipment manufacturer Liebherr will be marketing a new series of attachments for the demolition market this year.

Research and Development

Many subs are not standing still in the slow market, and a few are investing in new processes and practices. Enclos Corp. is one firm that is putting a lot of emphasis on research and development. “We have created an advanced technology studio to research everything from thermal to acoustical properties in the building envelope,” says Enclos’ Patterson. He says the industry has a bad record of investing in R&D, but Enclos believes the companies that come out of the recession with new and effective products will have a big advantage.

In addition, Enclos is retooling its marketing. Patterson notes that the typical contractor website is little more than a company brochure. Instead, Enclos is including on its websites technical documents and instructional guidelines to help educate potential clients on the language and concepts regarding the building en-

velope, Patterson says.

With an eye toward R&D, KHS&S acquired a BIM software firm last year and now is developing a program to allow different BIM software platforms to work together. Suder says the use of different platforms by different parties is a roadblock to the effectiveness of BIM.

While the workforce shortages of a few years ago have all but disappeared, many subs worry about the impact of the recession on future personnel needs. "There are 3,000 union electricians out of work in New York City, and that is tragic," says Mann. He says many people in the trades may consider retiring.

Some contractors are working to ensure they are prepared for the market turnaround. "We are doing our best to upgrade our expertise and skills," says Rondeau of Dunkin & Bush. The firm has maintained an internship program for the past three to four years. "A lot of young people are finding it tough to break into the industry in this market, but we are continuing to bring in young, talented people," Rondeau says.

Layoffs are a fact of life in this recession. However, some firms are taking advantage of this unfortunate situation. "We've started hiring high-quality people who were out of work," says Walker of Nicholson Construction. He says this is a new experience, saying, "Usually, the poor performers are let go in a recession, but we are finding some top people."

Southland Industries, on the other hand, is working hard to hold on to its people, transferring them from office to office, depending on where the work is. "We did not train them up only to let them go," says Lynch.

The panic many large specialty contractors felt last year has given way to a grim determination to pursue and perform work in a prudent manner, holding on until the market turns around. "The smart contractors will get stronger coming out of this," says Bacon. ■

“Usually, the poor performers are the ones let go, but we are finding top people available.”

— ANDY WALKER, CEO
Nicholson Construction Co.

Revenue Drops Across the Board

THE TOP 600 SPECIALTY CONTRACTORS

The recession took a brutal toll on many large specialty contractors and subcontractors as they burned through backlogs built up in the boom years. The economic impact is clear: ENR's Top 600 Specialty Contractors had a combined revenue of \$72.55 billion in 2009, down 16.6% from 2008. Of the 536 companies on this year's list that also submitted surveys last year, 414 saw declines in revenue in 2009, while 117 had increases in revenue. They expect more of the same in 2010.

HOW TO USE THE TABLES

COMPANIES are ranked according to construction revenue in 2009 in (\$ millions) from specialty contracting in a prime or subcontracting capacity. Firms that were not ranked in 2009 are designated by double asterisks (**). New contract awards refer to contracts awarded in 2009. NA=not available.

KEY TO SPECIALTY TYPE

A=asbestos abatement; **C**=concrete; **D**=demolition/wrecking; **E**=electrical; **G**=glazing/curtain wall; **M**=mechanical; **MA**=masonry; **O**=other; **P**=painting; **R**=roofing; **SH**=sheet metal; **ST**=steel erection; **U**=utility; **W**=wall/ceiling; **X**=excavation/foundation.

KEY TO MARKET TYPE:

GENERAL BUILDING includes commercial buildings, offices, stores, educational facilities, government buildings, hospitals, medical facilities, hotels, apartments, housing, etc.

MANUFACTURING includes auto assembly, electronic assembly, textile plants, etc.

POWER comprises thermal and hydroelectric powerplants, waste-to-energy plants, transmission lines, substations, cogeneration plants, etc.

WATER SUPPLY includes dams, reservoirs, transmission pipelines, distribution mains, irrigation canals, desalination and potability treatment plants, pumping stations, etc.

SEWERAGE/SOLID WASTE includes sanitary and storm sewers, treatment plants, pumping plants,

incinerators, industrial-waste facilities, etc.

INDUSTRIAL PROCESS includes pulp-and-paper mills, steel mills, nonferrous-metal refineries, pharmaceutical plants, chemical plants, food and other processing plants, etc.

PETROLEUM comprises refineries, petrochemical plants, offshore facilities, pipelines, etc.

TRANSPORTATION includes airports, bridges, roads, canals, locks, dredging, marine facilities, railroads, tunnels, etc.

HAZARDOUS WASTE comprises chemical- and nuclear-waste treatment, asbestos and lead abatement, etc.

TELECOMMUNICATIONS comprises transmission lines, cabling, towers, antennae, data centers, etc.
